## 1. License and credits

The template is released under the license of Creative Commons Attribuzione 3.0; which means that you are free to reproduce, distribute, and modify this work provided that you attribute authorship to us leaving our Credits on the topic unaltered.

This is something trivial if you take into consideration the work we have done, moreover we have worked hard to complete this template in order to render it graphically captivating and simple to personalize, and now we are offering it to you free of charge. What we ask from you is to acknowledge and make our work known. Your Inspiration Folio by [Your Inspiration Web](#) is licensed under a [Creative Commons Attribuzione 3.0 Unported License](#).

## 2. Support

If you are experiencing trouble with the personalization of the template or need to clarify any other issue, you can leave a comment on the respective article (link) or visit our support forum (link). If needed open a new thread: we will get back to you as soon as possible.

## 3. Package Content

Inside the archive you have downloaded you can find:

- The Photoshop (.psd) source file so that you can easily modify the graphic elements of the template;
- Theme folder in xhtml & css;
- Screenshots and a brief description of the theme characteristics;
- User's license.

## 4. PSD File

In the .psd file you can find all levels with the graphic elements used for the theme, from the background image to the balloon levels. The icons used on the left menu (twitter, e-mail, and skype) are free of charge and are available on the web.

## 5. XHTML Structure

The theme has a fixed layout in two columns, designed in such a way that the left column always remains the same and the right column scrolls vertically thanks to the use of a javascript. In particular, four standard pages have been already prearranged:

- **Home:** The theme's main page, which contains a brief and incisive welcome message;
- **About:** section in which you can introduce yourself and talk about yourself and your work experiences;
- **Portfolio:** page in which you can insert a thumbnail of your works: with the javascript light box, by clicking on one of the thumbnails, details of an enlarged image will open.
- **Contacts:** a functioning contact module is included in this page and, moreover, in the right section, you can insert your contact details.

## 6. Css

The file includes five css files:

- Ie.css
- Ie6.css
- Screen.css
- Print.css
- 960.css

Screen.css is the main style sheet which contains the styles of all pages, the colors, the formatting, etc.

Ie.css and Ie6.css contain the adaptations of style for Internet Explorer. These browsers interpret some html elements incorrectly and thanks to these css it is possible to correct some of these imperfections.

The 960.css file is a css framework while print.css is a print stylesheet.

## 7. Javascript

YourInspirationFolio has been developed by means of eight javascripts:

1. jquery.js
2. unitpngfix.js
3. mootools-yui-compressed.js
4. fancyzoom.js
5. scroll.js
6. dustismo\_400.font.js
7. cufon-yui.js
8. form-contact-validate.js

**Dustismo\_400.font.js** and **cufon-yui.js** are the javascripts that enable the loading of the non standard font used for the theme (dustismo). **Unitpngfix.js** is used for loading transparent images on Ie6. **Fancyzoom.js** and **mootools-yui-compressed.js** are used for the portfolio and allow the opening in a modal window of the image's details by clicking on the associated thumbnail. **Scroll.js** is the javascript that scrolls the site vertically. **Form-contact-validate.js** is the javascript which enables the validation of the contact module.

## 8. General Personalization

### 8.1 Home page – Modifying the balloon text

To modify the text of the first balloon, enough searching on the code the section contained in the div with the same class as “home”, which you can see in the screenshot below:

```
<!-- START HOME PAGE -->
<div class="home">
  <!---->
  <h1>
    Welcome in my <span>portfolio</span>: i do beautiful things, <span>web</span> &amp; <span>graphic</span> design,
    <span>illustration</span> and <span>marketing</span> services!
  </h1>
  <!---->
</div>
<div class="home-bottom-bg"></div>
<!-- END HOME PAGE -->
```

The text to be modified is underlined in red, enclosed within the **h1** tag. In order to modify the color of certain words from grey to red, enough writing the following syntax before and after the word to be formatted:

**<span>text in red</span>**

## 8.2 About – Modifying the balloon content

In the about page it is possible to modify the title, the text content and the avatar. In order to do it enough finding the div with the same class as “container-about” and modify:

1. The text inserted inside the **h2** tag for writing the page title.
2. The texts inserted inside the (**<p>**) paragraphs for modifying the description.
3. Modify the url address or the name of the image to be loaded as avatar, if saved with a different name “avatar.jpg” or in a folder different from “images”.

```
<!-- START ABOUT PAGE -->
<a id="about-page"></a>

<div class="about">
  <div class="grid_5 alpha">
    <div class="container-about">
      1. title <h2>About</h2>
      2. text
      <p>
        Qua puoi inserire alcune informazioni su di te: titolo di studio, eventuali corsi, certificazioni, attestati.
      </p>
      <p>
        Oppure puoi scrivere i tuoi sogni, come hai cominciato lavorare nel campo del <span>webdesign</span>, su quali progetti hai lavorato,
        uno slogan... insomma, tutto ciò che fa parte di te e che, in qualche modo, vuoi che ti rappresenti sul web.
      </p>
      <p>
        Inserisci una piccola foto o anche una <span>caricatura</span> come quella che ho inserito io: adesso le illustrazioni sono una vera tendenza!
      </p>
    </div>
  </div>
  3. avatar
  <div class="grid_4 omega avatar-image">
    
  </div>
  <div class="clear"></div>
</div>
<div class="about-bottom-bg"></div>
<!-- END ABOUT PAGE -->
```

## 8.3 Portfolio – Modifying the page title and the catchphrase

Like in the other pages, in the portfolio page you can also modify the title, by changing the script inside the `<h2>` tag. Moreover, you can personalize the catchphrase positioned in the top-right corner by modifying the text inserted inside the `<h4>` tag

```
<!-- START PORTFOLIO PAGE -->
<a id="portfolio-page"></a>

<div class="portfolio">
  <div class="grid_4 alpha">
    <div class="container-portfolio">
      1. title <h2>Portfolio</h2>
    </div>
  </div>
  <div class="grid_4 omega">
    <div class="portfolio-quote">
      2. slogan <h4>I hope you like my work and my work speaks for me.</h4>
    </div>
  </div>
```

### 8.3.1 Portfolio – Presenting a new work

Presenting a new work on the portfolio page is not difficult, enough following the same steps correctly.

- 1- Open a div with same class as “photo”
- 2- Create a link to the project, which will be recalled later on the page, after the section containing the thumbnails.
- 3- The code inside the <img> tag serves to generate the thumbnail. Modify the image’s name and leave the rest unaltered.
- 4- In the section where images are loaded, recall the project with the div of the same class as the link assigned in number 2.
- 5- Create a link of the project’s image.
- 6- If you want, insert the name and a brief description of the project.

```
<div class="container-portfolio">

    <!-- START THUMB IMAGE -->
    <div class="photo"> 1. Open a div with same class as "photo"
        <a href="#project01"> 2. Create a link to the project, which will be recalled later on the page
            
        </a> 3. The code inside the <img> tag serves to generate the thumbnail
    </div>
        The size of thumbnail are 85px * 85px

    <div class="clear"></div>
    <!-- END SMALL IMAGE -->

    <!-- START BIG IMAGE -->
    <div id="project01"> 4. The div is called of the link <a href="#project01"> inserted at point number 2
        <a href="images/portfolio/003.big.jpg#project01">
             5. with this link i call the project's image
        </a>
        <p class="foto_caption"><strong>Your Inspiration Web:</strong> WordPress Theme<strong> 6. insert a brief description of
        </div>
        <div id="project02">
            project
```

### 8.4 Contacts – Modifying the balloon content

In the contacts page you can easily modify the title and contact info in the right column. Inside the div of a “**container-contact**” class, modify the text inside the h2 tag to modify the page title and in the (<p>) paragraphs of the div with the same class as “**grid\_4 omega contact-info**” personalize the information that you want to display on the right column, next to the contact form.

```

<!-- START CONTACT PAGE -->
<!-- Contact page -->
<div class="contact">
    <div class="grid_3 alpha">
        <div class="container-contact">
            <div class="title">
                1. page title
            </div>
            <div id="log">
                <div id="log_res">
                    <!-- SPINNER -->
                </div>
            </div>
            <form id="contact" method="post" action="include/user_email.php">
                <div class="input">
                    <input type="text" id="visitor" name="visitor" value="Nome" onfocus="if (this.value=='') this.value='';" onblur="if (this.value=='') this.value='';" />
                    <input type="text" id="visitor_email" name="visitor_email" value="E-mail" onfocus="if (this.value=='E-mail') this.value='';" onblur="if (this.value=='') this.value='';" />
                    <input type="text" id="message" name="message" value="Messaggio" onfocus="if (this.value=='') this.value='';" onblur="if (this.value=='') this.value='';" />
                </div>
                <div class="button">
                    <input type="submit" value="Invia e-mail" />
                </div>
            </form>
        </div>
    </div>
    <div class="grid_3 omega contact-info">
        <div class="title">
            2. text of right column
        </div>
        <div class="text">
            Non esitate a contattarci.
            Compilate il form o contattateci tramite skype.
        </div>
    </div>
</div>

```

### 8.4.1 Contacts – Setting the contacts module

For setting the contact module and setting up your e-mail address for the receiving of messages, you have to open the **config.php** file which is to be found in the **include** folder and substitute the e-mail [info@example.com](mailto:info@example.com) with your e-mail address.

```

//-----
// PARAMETRI DI CONFIGURAZIONE GENERALE
//-----
$emailAdmin = "info@example.com"; // email admin dove vengono spedite le comunicazioni
$uriWebSite = "www.example.com"; // uri del sito web che viene aggiunto in fondo alle mail inviate dal modulo contatti

$headers_email = "From: Company Name <info@example.com>\nReply-to: info@example.com";
define("BUCKET_MAIL", "Contatto dal sito.");

//-----
// TEMPLATE MAIL
//-----
date_content_email = ""
Hai ricevuto questa email poiché un utente ha utilizzato la scheda dei contatti presente sul sito internet.
Di seguito i dati personali dell'utente che ti ha contattato:
-----
Nome e Cognome: (name)
E-mail: (mail)
Indirizzo IP: (ip)
-----
Questa è la richiesta dell'utente:
-----
Messaggio: (corpo)
-----
Se vuoi fornire un buon servizio fornisci all'utente una risposta soddisfacente nel giro di poche ore.
{uri}

```

Always in this file you can also personalize the heading and the body of the e-mail.

## 8.5 Configuring the contact section under the navigation

```
<!-- START FOLLOW ME -->
<a href="#" title="follow me on twitter">
  
</a>
<!-- END FOLLOW ME -->

<!-- START SEND ME AN EMAIL -->
<a href="mailto:info@example.com" title="Send me an email">
  
</a>
<!-- END SEND ME AN EMAIL -->

<!-- START ADD ME ON SKYPE -->
<a href="#" title="Add me on Skype">
  
</a>
<!-- END ADD ME ON SKYPE -->
```

For configuring the contact options for Facebook, Twitter and the e-mail, enough inserting your Twitter and Skype profile links and your e-mail address.
