Immaculate
One Page Portfolio Template

"Immaculate" is a **modern, beautiful** and **Clean One Page Portfolio Website Template** with a refreshing layout. It is also **fast loading**, **cross browser compatible** and is built to suit all kinds of businesses as well as personal needs. The template is made using **HTML5, CSS3** and **jQuery** and has **web fonts**, **shortcodes**, **Flickr Image Slider** along with **working Ajax contact form** and a lot more. You are free to use it for your personal as well as commercial projects. It is released under **New BSD License**, read more about it here.

Release Page at **http://www.priteshgupta.com/templates/immaculate/.**

Using Slider
Zurb's Orbit slider is being used for the image slider, the images are fetched of a flickr username. To change the flickr id, open functions.php and replace your desired it with 33871992@N07. You can do a lot more with the flickr plugin, read about it here: http://www.gethifi.com/blog/a-jquery-flickr-feed-plugin.

Using Shortcodes
Boxes
Using a shortcode is really easy, just use the HTML code where ever you want to use them, customize it, and it's done.
The HTML shortcode for a normal box is **"<div class="box normal rounded full">".** You can remove the **"rounded"** if you prefer square boxes. Similarly, you can remove the **"full"** if you don't want full border. For different box types, replace **"normal"** with your desired type, possible choices are **normal, info, tick, note, download, alert.**

Colored Buttons
For using buttons, use the HTML syntax **"Button".** Where **"Button"** is the button text which you will like to display, and replace **"red"** with your desired button color

type, possible options are **silver, red, orange, green, aqua, teal, purple, pink**. If you don't specify any color, then default **blue** button will be displayed.

Icons Buttons
Using Icons Buttons is very much same as using colored buttons, use the HTML syntax **"Button"** and specify the button color like above, and change the **"search"** with desired button icon, possible choices are **search, stats, alert, tick, info, note, author, mail, notice, paper, people, download.**

Customizing Gallery
Fancybox has been used for galleries, for help with it, head over to http://fancybox.net/howto.

Customizing Contact
A working PHP Ajax Contact Form is already in place, just replace your email id with **"you@email.com"** and **"Your Name"** with your name in **"process.php".**

Typography
The template uses the font "Open Sans" by Steve Matteson and "Bebas Neue" by Dharma Type**.**

For any other query which is beyond the scope of this read me, please comment at http://www.priteshgupta.com/templates/immaculate/ or contact me via the contact form at http://www.priteshgupta.com/contact/.
